ZADÁNÍ BAKALÁŘSKÉ PRÁCE

Datum: 4.4.2012

Student: Marek Bryša

Program: Informatika

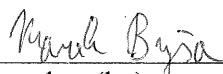

Obor: Matematická informatika

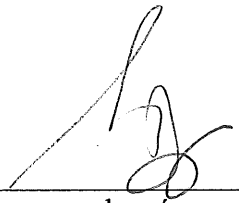

Vedoucí práce: doc. Ing. Michal Brandejs, CSc.

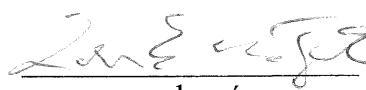

Název práce: **Design and implementation of a social network for making acquaintances**

Zadání: The student will familiarize himself with a few existing social networks for making acquaintances between users. He will describe his research and evaluate the pros and cons of those networks. The student will familiarize himself with technologies that could be used to implement such networks and describe them in brief. The student will familiarize himself with relevant aspects of privacy protection and describe them shortly. The student will propose his own solution and describe it. The student will implement a prototype of his own social network. The prototype must be functioning. Description of the solution from a programmer's point of view will be included.
